

SKANDIKA TRAINING DATA APP

Turn your smartphone or tablet into a modern training device computer with the Skandika Training Data App. Download the app either via the search function of your app store or by scanning the QR code and then install it on your iOS or Android device. After successful installation, start the app on your mobile device.

In order to record training data, the training device must first be connected to the app. For iOS, make sure the Bluetooth connection is switched on. For Android, both the Bluetooth connection and location connection must be switched on.

Compatible Skandika training devices: Styrke II & Nemo III, IV und V

As soon as the device is connected to the app, it appears under „My devices“ (see adjacent figure).

To start training, select the Training tab and tap on „Start training“.

If there are problems with the connection, the following steps may help:

1. Make sure the Bluetooth and location settings are activated in the device settings of the smartphone or tablet. For Android devices, „Wi-Fi scanning“ and „Bluetooth scanning“ must also be activated in the location settings.
2. Restart the Bluetooth adapter / training computer by removing the batteries and then reinserting them.
3. Make sure the training device is not connected to any other apps (such as Kinomap for example).
4. Update the app to the latest version.
5. Replace the batteries in the Bluetooth adapter / training computer if they are flat.
